

NATURAL AND STABLE VITAMIN C FOR ANIMAL NUTRITION

- 100% natural
- Full stability for pelleted and extruded diets
- High bioavailability
- Cost-effective vitamin C supplement for all species

C-POWER®

C-POWER®

Besides its role as antioxidant, vitamin C is important to many metabolic processes, including the recycling of vitamin E, biosynthesis of collagen, and a significant role in the functionality of the immune system.

 **100% natural**

 **Full stability for pelleted and extruded diets**

 **High bioavailability**

 **Cost-effective vitamin C supplement for all species**

Most farm animal species can endogenously synthesize enough vitamin C. However, that is not the case for the very young ones (chicks and newborn piglets, e.g.) and those under challenging conditions, such as heat stress and weaning. For fish and shrimp, vitamin C is an essential nutrient and must be supplied in the feed.

While regular vitamin C supplements are very unstable when exposed to heat and light, therefore, not suitable for pelletized or extruded feed, stabilized forms are very costly.

C-Power® is a 100% natural feed supplement of vitamin C to all species. It is composed of plants that contain vitamin C analogs (gallotannins), which are very stable and very effective, besides other natural antioxidants. Such complex composition guarantees C-Power® sustained bioactivity and outstanding efficacy to manage oxidative stress.
