

NATURAL HEPATOPROTECTOR FOR THE DEMANDING INTENSIVE ANIMAL PRODUCTION

- Protection against liver damage
- Improved digestive function
- Enhanced productivity

LivoLiv®

The liver is the organ that performs the greatest number of vital functions to the animal organism, among which three are particularly relevant:

- Detoxication of the organism from toxins
- Storage of energy (glycogen) and liposoluble vitamins (A, D, E, and K)
- Nutrient digestion (through the production of bile acids) and metabolization

LivoLiv®

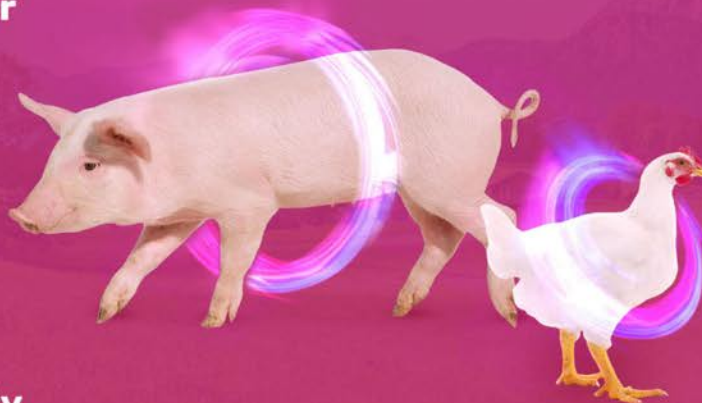

The liver of poultry and swine in intensive production systems is often damaged by a variety of substances, both endogenous (free radicals, e.g.) and exogenous (mycotoxins, heavy metals, antibiotics, and growth promoters, e.g.). A compromised liver activity may be a limiting factor for growth, egg production, reproduction, etc.

Protection against liver damage

Improved digestive function

Enhanced productivity

LivoLiv® is a 100% natural hepatoprotective supplement, composed of several plants, such as *Phyllanthus niruri* and *Azadirachta indica*, known for their hepatoprotective properties in traditional medicine.

LivoLiv® minimizes the damage of the liver through the optimization of its detoxication capacity. Additionally, it stimulates the synthesis of hepatic digestive enzymes, improving the digestibility and absorption of carbohydrates, protein, lipids and vitamins.
